The AppEngine comes with an SDK which can be installed locally to develop and test web applications. The Python version of the SDK includes Django as web framework, but others may be used as well. The Datastore implements a scalable persistent storage of data, using GL, which is a SQL-like data query and manipulation language.

### AppEngine - Python Wiki

Let's create a virtual environment in our flask-app directory:. python3 -m venv env This command creates an env folder in our directory. The name (in this case, env) is an alias for the virtual environment and can be named anything. Now that we've created the virtual environment, we have to tell our project to use it.
