BIOLOGICAL WASTEWATER TREATMENT PRINCIPLES GENERAL OVERVIEW

This is the most common and oldest biotreatment process used to treat municipal and industrial wastewater. Typically wastewater after primary treatment i.e. suspended impurities removal is treated in an activated sludge process based biological treatment system comprising aeration tank followed by secondary clarifier.

Biological Wastewater Treatment: 2nd edition | IWA Publishing

In wastewater treatment, membrane bioreactors are common, combining a membrane like microfiltration or ultrafiltration with a biological wastewater treatment process like activated sludge. The membrane effectively removes solids and microorganisms while the activated sludge process treats the wastewater, producing clean water and solids for further treatment before discharge.
