Although these examples are from the K-12 setting, they are easily adaptable to the university setting.

Bloom's Taxonomy | Center for Teaching | Vanderbilt University

Bloom's taxonomy is a set of three hierarchical models used to classify educational learning objectives into levels of complexity and specificity. The three lists cover the learning objectives in cognitive, affective and sensory domains. The cognitive domain list has been the primary focus of most traditional education and is frequently used to structure curriculum learning objectives, assessments and activities.

Bloom's taxonomy - Wikipedia

One of the approaches to delivering the right training is by applying Bloom's Taxonomy to eLearning. Bloom's Taxonomy is an old concept that has been in existence since 1956 and has been used for traditional classroom training. However, it was revised in 2001 in order to meet the modern approach to learning. One of the roles of Bloom's Taxonomy ...

Applying the "Congruence" Principle of Bloom's Taxonomy to ...

The first feature of Linnaeus's taxonomy, which makes naming organisms uncomplicated, is the use of binomial nomenclature. This naming system devises a scientific name for an organism based on two terms: The name of the organism's genus and the name of its species. Both of these terms are italicized and the genus name is capitalized when writing.

Linnaeus's System of Taxonomic Classification

Taxonomy, in a broad sense the science of classification, but more strictly the classification of living and extinct organisms. The internationally accepted taxonomic nomenclature is the Linnaean system created by Swedish naturalist Carolus Linnaeus, who drew up rules for assigning names to plants and animals.
