Creep Behavior Of

Linear Low Density Polyethylene (m-LLDPE), a random copolymer of PP with a few mole percent of ethylene and their blends. The aim of this work is to study the creep and stress relaxation behaviors of the m-LLDPE, PP and their blends so as to find whether the m-LLDPE added to the PP has any effect on the relaxation and retardation times.

the corresponding strain is below $\sim 0.5 \times 10^{-2}$.

1.0 Introduction

Viscoelasticity is the property of materials that exhibit both viscous and elastic characteristics when undergoing deformation. Viscous materials, like water, resist shear flow and strain linearly with time when a stress is applied. Elastic
