Train Problems And Solutions

Epicyclic gearing or planetary gearing is a gear system consisting of one or more outer gears, or planet gears, revolving about a central, or sun gear.

Key Facts. Types of Gear Trains. Simple Train - three or more wheels connected in series. Compound Train - an intermediate shaft carries two wheels connected in series.

planetary gear) consists of two gears mounted so that the center of one gear revolves around the center of the other. A carrier connects the centers of the two gears and rotates to carry one gear, called the planet gear or planet pinion, around the other, called the sun gear or sun wheel. The planet and sun gears mesh so that their pitch circles roll ...

train, the axes of the shafts, over which the gears are mounted, move relative to a fixed axis. A simple epicyclic gear train is shown in Fig. 14.15. L where a gear A and the arm C have a common axis at O_1 about which they can rotate. The gear B meshes with gear A and has its axis on the arm O_2 , about which the gear B can rotate. If the arm is fixed, the gear train is
