Guided practice is defined as scaffolded independent practice that occurs before minimally-assisted independent practice. During guided practice, the teacher empowers students to practice skills on their own for the first time, giving concrete, actionable feedback to everyone and additional focused attention to specific learners that need it.

Kinematic equations relate the variables of motion to one another. Each equation contains four variables. The variables include acceleration (a), time (t), displacement (d), final velocity (v_f), and initial velocity (v_i). If values of three variables are known, then the others can be calculated using the equations. This page demonstrates the process with 20 sample problems and accompanying ...
